#### Step1- Canon Pixma MX490 Wireless Printer Setup configuration

First of all, make sure that your wireless router is connected with a network device computer, printer, and more to the internet.

Check your connection smoothly connected between system and network for the furthermore operation.

Make sure the printer is connected to the socket plug, and power is 'ON' and green light of printer is ON.

Even power is switch on, and printer screen display is black, then click the copy button, and that is followed by setup button after that you can find the screen ON and display of the touch panel.

On the touch panel screen display an optional Wireless LAN configuration, press the OK button. You can see multiple choices on the touch screen then you can click OK.

After then select cable-less configuration Canon Pixma mx490 from printer touch screen panel.

Now you have to need to download and install the printer software from the canon website or through CD ROM.

If you have Mac and setup your printer on Mac then you can go on our blog Guide to [Install Canon MX490 Printer on MAC](#)

#### Step2- How to connect Wireless network with Canon Pixma MX490 Printer

Now download the printer driver setup, select the system type, operating window, and select the folder. Run and install the download file through by click.

Select the option Wireless LAN connection for Canon Pixma mx490 printer technique that selects connection through the wireless router.

Ensure the printer is ON mode, the software will search printer automatically that are connected to the network. If you will show the first time list is black that means printer setting box can't find out on the list.

After that, you will install the configuration manual on the device and select the cable less or wireless configuration from the submenu.
